

Dear Editor,

Please find attached our manuscript titled “Synthetic-Emotional Calibration (SEC): A Governed Control Interface for Stability and Viability in Instrumented Cognitive Systems” by John H. Cragin, submitted for consideration in AI & Society.

This work introduces a formal governance interface for regulatory modulation in cognitive systems prioritizing viability and stability. The manuscript specifies the representation, semantics, and governance properties of SEC, and situates it within a broader Regulatory Intelligence research program. Empirical validations and companion materials are referenced within the manuscript and archived in a public repository (Zenodo DOI: <https://zenodo.org/records/18370539>).

The material has not been published elsewhere and is not under review at another journal.

Thank you for your consideration.

Sincerely,

John H. Cragin
